

# Online Medical Store System

## ***Medicine Module :***

The main aim for developing this module is to manage the medicine data wise. All medicines will be managed by admin and customer will be able to see medicine. Admin can see the list of all the medicine and filter it according to the customers.

## ***Features of Medicine Module:***

1. Admin can manage the medicine
2. Admin can edit/delete the medicine
3. Admin can see the list of all medicine
4. Customer can see medicine

## ***Medicine Type Module :***

The main objective for developing this module is to manage the medicine type. So all medicine company will be managed by admin and customer will be able to see the medicine type

## ***Features of Medicine Type Module:***

1. Admin can manage the medicine type
2. Admin can edit/delete the medicine type
3. Admin can see the list of all medicine type
4. Customer can see medicine type

## ***Order Module :***

The main purpose for developing this module is to manage the customer order. Admin will manage all order record.

## ***Features of Order Module:***

1. Admin can manage the order
2. Admin can edit/delete the order
3. Admin can see the list of all order
4. Customer can see his order

## ***Medicine Stock Module :***

The main purpose for developing this module is to manage the customer medicine stock. Admin will manage all medicine stock record.

***Features of medicine stock Module:***

1. Admin can manage the medicine stock
2. Admin can edit/delete the medicine stock
3. Admin can see the list of all medicine stock
4. Customer can see his medicine stock

I have developed this project using the below technology

1. HTML : Page layout has been designed in HTML
2. JavaScript : All the validation task and animations has been developed by JavaScript
3. JSP : All the front end logic has been written in JSP
4. Java : All the bussiness logic has been written in Java
5. MySQL : MySQL database has been used as database for the project
6. Tomcat : Project will be run over the Tomcat server
